

Syllabus: SIO 143/269 Ocean Acidification Winter quarter 2015

Lectures: Tue & Thur 15:30-16:50 VH100
Discussions: Tue 17:00-17:50 VH100
Office hours: By appointment or before and after class

INSTRUCTOR: Andreas Andersson
Office: VH301
Tel.: 858-822-2486
E-mail: aandersson@ucsd.edu

OBJECTIVES: The objective of this class is to provide a broad understanding of the problem of ocean acidification (OA) and its potential effects and consequences to the Earth's geobiosphere on timescales ranging from decades to 100,000s of years. To understand the problem of OA it is critical to have a good understanding of seawater CO₂ chemistry and how physical, chemical, geological and biological processes affect and interact with the marine CO₂ system. Thus, the intricacies of this system will be reoccurring topics throughout this class as we explore the effects of OA on biogeochemical processes, organisms, ecosystems, food webs, and the human society. Different experimental approaches, basic chemical measurements, calculations and modeling approaches will also briefly be covered.

TEXTBOOKS: The lectures will follow the chapters in Gattuso & Hansson (2011) and this book is required/strongly recommended in order to succeed in the class. In addition, students will be provided relevant material from Zeebe & Wolf-Gladrow (2001) and are not required to buy this book. Some material will be used from Riebesell et al. (2010) and Mackenzie & Andersson (2013), which can be downloaded for free online. Note that there is a scam site that is trying to charge money for the Riebesell book – do not pay for it!

Gattuso & Hansson, 2011. *Ocean Acidification*. Oxford University Press, 326 p.

Zeebe & Wolf-Gladrow, 2001. *CO₂ in seawater: equilibrium, kinetic, isotopes*. Elsevier, 346 p.

Riebesell et al., 2010. *Guide to best practices for ocean acidification research and data reporting*. European commission, 258 p. Available online at: <http://www.epoca-project.eu/index.php/guide-to-best-practices-for-ocean-acidification-research-and-data-reporting.html>

Mackenzie & Andersson, 2013. *The marine carbon system and ocean acidification during Phanerozoic time*. *Geochemical Perspectives*, vol 2, 227 p. Available online at: <http://www.geochemicalperspectives.org/online/v2n1>

ARTICLES: In addition to readings from the textbooks you will be assigned to read several scientific articles. On occasion we will discuss these articles in class and it is critical that you have read the articles prior to class.

COMPUTER SOFTWARE: As part of the class you will be asked to carry out a number of calculation and modeling exercises. To do this you will need access to CO2SYS (Excel version or MS-DOS version; <http://cdiac.ornl.gov/oceans/co2rprt.html>) or CO2calc (http://cdiac.ornl.gov/oceans/CO2SYS_calc_MAC_WIN.html).

If time permits we will also briefly explore Seacarb (to run Seacarb you have to first install R), Ocean Data View v. 4.2.0., and Matlab to carry out marine carbon chemistry calculations. To install these programs go to <http://www.whoi.edu/courses/OCB-OA/> click on *Course Materials*, scroll down until you get to the title REQUIRED SOFTWARE and follow the instructions.

ASSIGNMENTS: Both reading assignments and computational exercises will be given throughout the course. It is expected that each student will complete these. Collaboration is encouraged.

TERM PROJECT: A term project will be assigned during the second week of class. As part of this project you will have to give a short presentations and submit a final paper.

DISCUSSION SESSIONS: are not mandatory due to that some students have conflicting schedules and it would be unfair to require participation of some but not others. Discussion sessions will mainly focus on addressing questions or reviewing material covered in the class.

GRADING:

The main objective is that you learn something from this class. You will have the opportunity to demonstrate this by showing your knowledge and understanding during a midterm and final exam, effort (term project and assignments) and participation (ask questions and participate in discussions).

Participation	10%
Assignments	15%
Term project	25%
Midterm exam	25%
Take-home final exam	30%

MAINTAINING ACADEMIC INTEGRITY:

Students agree that by taking this course all required papers will be subject to submission for textual similarity review to Turnitin.com for the detection of plagiarism. All submitted papers will be included as source documents in the Turnitin.com reference database solely for the purpose of detecting plagiarism of such papers. Use of the Turnitin.com service is subject to the terms of use agreement posted on the Turnitin.com site. This course will also adhere to the standard UCSD policy on academic integrity: "Students are expected to do their own work, as outlined in the UCSD Policy on Integrity of Scholarship. Cheating will not be tolerated, and any student who engages in forbidden conduct will be subjected to the disciplinary process. Cheaters will receive a failing grade on the assignment or the exam and/or in the entire course. They may also be suspended from UCSD." See <http://www-senate.ucsd.edu/manual/Appendices/app2.htm> for details.

PRELIMINARY SCHEDULE

Week	Month	Day	WeekDay	Overarching topic
SEAWATER CHEMISTRY & PAST OA EVENTS				
2	Jan	6	T	Introduction/Marine CO2 system
		8	Th	Marine CO2 system
Marine CO2 system/Methods and instrumentation				
3	Jan	13	T	CO2 system calculation software
		15	Th	
Past changes in ocean carbonate chemistry & past OA events				
4	Jan	20	T	Past changes in ocean carbonate chemistry & past OA events
		22	Th	Past changes in ocean carbonate chemistry & past OA events
Recent and future changes in ocean carbonate chemistry				
5	Jan	27	T	Biogeochemical consequences
		29	Th	
EFFECTS ON BIOGEOCHEMICAL PROCESSES				
6	Feb	3	T	Update/discussion Term project
		5	Th	Biogeochemical consequences
Biogeochemical consequences				
7	Feb	10	T	Biogeochemical consequences
		12	Th	Biogeochemical consequences/Midterm review
EFFECTS ON ORGANISMS ECOSYSTEMS AND FOODWEBS				
8	Feb	17	T	Midterm
		19	Th	Effect on organisms/ecosystems
Effect on organisms/ecosystems				
9	Feb	24	T	Effect on organisms/ecosystems
		26	Th	Effect on organisms/ecosystems
Effect on organisms/ecosystems/OA and society				
10	March	3	T	Effect on organisms/ecosystems
		5	Th	Effect on organisms/ecosystems/OA and society
OA CHALLENGES FACING SCIENCE & SOCIETY				
11	March	10	T	Solutions, mitigation scenarios
		12	Th	Presentations and discussion Term project
Presentations and discussion Term project				
12	March	14-21	M-F	FINALS WEEK
