# Syllabus 202A (Acoustics)
# W. A. Kuperman

**1 Fundamental Acoustics: Some Background**

**2 Fluid Mechanics, Thermodynamics and the Acoustic Wave Equation**

2.1 Basic Equations of Fluid Mechanics

2.2 Some Thermodynamics

2.3 The Linear Wave Equation

**3 Acoustic Waves**

3.1 Introduction

3.2 Preliminaries: Complex Notation

3.3 Acoustic Waves from Fluid Mechanics

3.4 Wave Equation Solutions in Cartesian Coordinates

3.5 Energy, Power and Intensity

3.6 Energy

3.7 Spherical Waves

3.8 A Simple Source

3.9 Dipole Source

3.10 More on Units

**4 Ocean Acoustics and More on Sound Transmission**

4.1 Bottom Loss: Reflection and Transmission

4.2 Ocean Acoustic Environment

4.3 Attenuation

4.4 Scattering and Reverberation

4.5 Ambient NoiseSound Propagation Models

**5 Sonar Equation**

5.1 Introduction

5.2 Detection Threshold and ”ROC” Curves

5.3 Sonar Equation

**6 The Wave Equation for Sound Propagation in the Ocean**

**7 Some Simple Array Processing**

Syllabus for Ken Melville's half of
SIO202A: Ocean Waves (Surface and Internal Waves),
Winter 2016

# Contents

**1 References** **5**
- 1.1 General Fluid Dynamics . . . 5
- 1.2 Books on Waves . . . 5
- 1.3 Mathematical Reference Books . . . 6

**2 Linear Surface Waves** **7**
- 2.1 Governing Equations and Boundary Conditions . . . 7
  - 2.1.1 Boundary Conditions . . . 11
- 2.2 Wave Dispersion . . . 17
  - 2.2.1 Linear waves in water of constant depth . . . 17
  - 2.2.2 Velocity and pressure fields . . . 25
  - 2.2.3 Lagrangian motion of the fluid: particle trajectories . . . 26
  - 2.2.4 Homework No. 1 . . . 29
  - 2.2.5 Wave modulation and the group velocity . . . 30
  - 2.2.6 Wave energy and the group velocity . . . 31
- 2.3 Dispersion of an Initial Disturbance . . . 34
  - 2.3.1 Long-time response to an intial disturbance: general results and approximations . . . 34
  - 2.3.2 The example of gravity waves on deep water . . . 35
  - 2.3.3 Long-time response to an intial disturbance: more formal detailed results and approximations . . . 36
  - 2.3.4 Fourier transform solution . . . 37
  - 2.3.5 Method of stationary phase . . . 39
  - 2.3.6 Dispersion for large t . . . 40
- 2.4 Homework 2 . . . 43
- 2.5 Nonlinear waves in shallow water . . . 45
  - 2.5.1 Example: The dam-break problem . . . 47
- 2.6 Hydraulic Jumps . . . 48

2.7 Wave distortion and breaking . . . . . 50

**3 Internal waves** **55**
3.1 Formulation:Boussinesq Approximation . . . . . 55
3.2 Small-scale internal waves . . . . . 59
3.3 Energetics of small-scale internal waves . . . . . 61
3.4 Homework 3 . . . . . 64
3.5 Reflection of small-scale internal waves at a sloping bottom . . 65
3.6 The modal structure of internal waves . . . . . 68
3.6.1 Example: N=constant . . . . . 70

**4 Informal notes on the Tsunami of December 26, 2004** **73**
4.1 Introduction . . . . . 73
4.2 Linear long wave model . . . . . 74
4.2.1 Linear wave speed: phase speed . . . . . 76
4.2.2 Travel Time . . . . . 76
4.2.3 Water speed . . . . . 76
4.2.4 Wave Amplification in Shallow Water: Green's law . . 77
4.2.5 Precursor wave of depression . . . . . 77
4.2.6 Nonlinear effects . . . . . 78
