

SIO203C/MAE2904C: PDE Notes A

W.R. Young ¹

April 2018

¹Scripps Institution of Oceanography, University of California at San Diego, La Jolla, CA 92093-0230, USA.

Contents

1	First-order PDE's	6
1.1	The simplest partial differential equations	6
1.2	The Jacobian	11
1.3	A first look at the method of characteristics	13
1.4	Some books	18
1.5	Problems	19
2	Conservation laws and evolution equations	23
2.1	Conservation laws	23
2.2	A recipe for semilinear evolution equations	27
2.3	Entry on the half-line	30
2.4	Age-Stratified Populations	32
2.5	Probability generating functions	36
2.6	Problems	41
3	Quasilinear equations	47
3.1	Characteristics and their properties	48
3.2	A quasilinear recipe	50
3.3	More dimensions	54
3.4	Pathology of quasilinear PDEs	57
3.5	The nonlinear advection equation	58
3.6	Shocks, caustics and multivalued solutions	63
3.7	Problems	65

4	The diffusion equation $u_t = \kappa \Delta u$	69
4.1	Origin of the diffusion equation	69
4.2	Smoothing a discontinuity or “front”	71
4.3	Discussion of the similarity method	72
4.4	The Green’s function for diffusion on the line	74
4.5	Solution of the diffusive initial value problem	76
4.6	Diffusion with a source	80
4.7	Specialized references to diffusion	81
4.8	Problems	82
5	Diffusion on the half-line	87
5.1	Half-line problems and images	87
5.2	Heating and cooling the Earth	89
5.3	Inhomogeneous boundary conditions	92
5.4	Problems	94
6	Diffusion on a finite interval	99
6.1	Diffusion of a heat around a wire loop	99
6.2	The Fourier method	103
6.3	Inhomogeneous boundary conditions	107
6.4	Inhomogeneous equations	109
6.5	Problems	110
7	Laplace’s equation $\Delta u = 0$	113
7.1	The δ -function in $d = 3$	114
7.2	The Green’s function in unbounded space	115
7.3	Other dimensions	117
7.4	The d -dimensional diffusion Green’s function	118
7.5	The efficiency of diffusion depends on d	119
7.6	Problems	122

8	Laplace's equation in $d=2$	124
8.1	Discrete harmonic functions	124
8.2	From the discrete to the continuous	127
8.3	The Dirichlet and Neuman problems in $d = 2$	129
8.4	Separation of variables	131
8.5	Laplace's equation via analytic functions	132
8.6	Laplace's equation in the upper half plane	133
8.7	Minimization of the Dirichlet functional	136
8.8	The disk: Poisson's formula	137
8.9	References	139
8.10	Problems	139
9	Shocks and conservation laws	145
9.1	Multivalued solutions and shock propagation	145
9.2	Two examples of shock propagation	146
9.3	Shocks from continuous initial conditions	148
9.4	Burgers' equation and travelling waves	151
9.5	Problems	154
10	The Lighthill-Whitham traffic model	158
10.1	Formulating the model	158
10.2	The green light problem	160
10.3	The red light problem	164
10.4	Red light and green light	164
10.5	References	167
10.6	Problems	167

11 The 1D wave equation: $\zeta_{tt} = c^2\zeta_{xx}$	171
11.1 Waves on a string	171
11.2 Energy conservation	174
11.3 The initial value problem on the real line	174
11.4 Factorization of second-order constant coefficient operators	177
11.5 The forced string: Duhamel again	179
11.6 The method of images and reflections	182
11.7 Waves on a finite string	183
11.8 Problems	187
12 The wave equation in higher dimensions: $\phi_{tt} = c^2\Delta\phi$	189
12.1 Acoustics	189
12.2 Spherical waves in $d = 3$	190
12.3 Descent to $d = 2$	194
12.4 Inhomogeneous wave equation: Duhamel again	196
12.5 Problems	197
13 Classification of second-order pdes	199
13.1 Preliminary examples	199
13.2 Second-order PDEs with variable coefficients	200
13.3 The wave equation with non-uniform c	204
13.4 Cauchy data	206
13.5 Problems	208
14 The Fourier Transform	210
14.1 Definition of the Fourier transform	210
14.2 Inverse transforms: the FIT	212
14.3 More examples	215
14.4 Parseval's Theorem	216
14.5 Transforms of derivatives and integrals	217
14.6 Solution of differential equations	218

14.7 Convolution	222
14.8 Proof by intimidation of the FIT	223
14.9 Problems	224
15 Radiation	228
15.1 Discussion of “forever problems”	228
15.2 Radiation from a compact source	229
15.3 Radiation damping of an oscillator	230
15.4 Radiation from a moving source	232
15.5 Problems	233
16 Partial difference equations	235
16.1 The θ -transform	235
16.2 Mach bands	237
16.3 Problems	239
