

Course Syllabus

Description

The course goal is to provide knowledge of atmospheric structure, composition and processes. This course is designed to provide an enduring understanding of: energy content and transfers, water saturation, and climate forcings and feedbacks. The essential questions that will focus, guide, and sustain learning during the course are:

- What does energy content and transfer reveal about the Earth's temperature?
- How does water saturation link clouds, temperature, and stability in the atmosphere?
- How do forcings and feedbacks shape my views of human role in the Earth system?

This course is designed to provide first-year graduate students with climate-relevant knowledge of the atmosphere; some students are focused on this area specifically for future research and others just want some introductory knowledge. The course is designed to address both of these interests.

Learning Objectives

After completing this course, students will know how to apply thermodynamic principles to understand atmospheric processes and students will be able to explain the role of thermodynamic relationships in atmospheric processes. Specific objectives of this course are listed by chapter below.

Chapter 1: Identify fundamental thermodynamic concepts.

1. Relate pressure, temperature and energy to define the state of a fluid.
2. Quantify the kinetic theory of gases using the ideal gas equation of state.
3. Apply the hydrostatic balance to idealized conditions.

Chapter 2: Describe heat-work cycles, including the Carnot cycle.

1. Evaluate the heat and work associated with specific adiabatic or isothermal state changes.
2. Distinguish between states and pathways.
3. Use the first and second laws of thermodynamics to quantify energy, heat, and work.
4. Distinguish between enthalpy, entropy, and Gibbs free energy.
5. Evaluate hurricanes as Carnot cycles.

Chapter 3: Describe optical properties and radiative balance of the atmosphere.

1. Define optical properties of the atmosphere and use them to describe radiative transfer.
2. Distinguish between diffuse and direct, irradiance and radiance, absorption and reflection.
3. Define radiative transfer laws: Kirchoff, Wien, Stefan-Boltzman, Planck
4. Use the principles of blackbody radiation to describe Earth's radiative balance (Ch. 12).

Chapter 4: Identify what controls water phase transition.

1. Sketch the phase diagram of water and explain the meaning of its lines and spaces.
2. Apply the Clausius-Clapeyron equation to calculate the change in saturation pressure.
3. Define the variables used to track atmospheric water and energy.
4. Identify and explain the unique properties of water and its role in cloud formation.

Chapter 5: Evaluate the processes and effects of aerosol-cloud phase transitions.

1. Review what clouds are and how they form.
2. Describe how nucleation forms phases.
3. Calculate effect of particle composition on critical supersaturation.
4. Calculate drop distributions and their properties.

Chapter 6: Quantify processes associated with cloud formation.

1. Identify the causes of cloud formation and the processes that are relevant.
2. Evaluate the amount of water that will condense when a cloud forms.
3. Use dew point temperatures as a metric of relative humidity.

Chapter 7: Evaluate atmospheric stability and describe its role in vertical circulation.

1. Describe how water vapor and liquid affect the degree (and sign) of stability.
2. Define convective available potential energy and apply it to describing changes in clouds.

Chapter 8: Describe cloud characteristics for types of low, middle, and high clouds.

1. Distinguish optical properties for different cloud types.

2. Distinguish likelihood for precipitation for different cloud types.

Chapter 12: Relate Earth's radiation budget to large-scale circulation.

1. Use simple climate model to evaluate the components that affect global mean temperature.
2. Describe the different energy streams that affect the Earth's radiative balance.
3. Identify the consequences of radiation for driving circulation poleward and longitudinally.

Chapter 13: Explain three examples of climate feedbacks.

1. Distinguish between climate forcings and feedbacks.
2. Explain three important feedback loops in the Earth system.

Required Materials

The required text is *Thermodynamics of Atmospheres and Oceans*, J. A. Curry & P. J. Webster (1999). It is available for purchase at the Bookstore and is also available as pdf on the course website. Supplementary reading material and handouts (or links to them) are posted on the TritonEd course site.

Course Information

This course is part of an integrated 3-quarter series (SIO 217 a, b, c). Although it is formally a lecture course, we will incorporate student participation and student projects as integral parts of class. This form of teaching recognizes that students come to class with prior knowledge on the topics to be studied. Sometimes this knowledge is profound and accurate. Sometimes it isn't. Learning involves first confronting our prior knowledge. This form of teaching also stresses the similarity between the learning experience and the research experience. We learn by actively engaging in formulating questions and discovering the answers to them. This is very different from rote memorization of facts, lecture notes and pages of text.

This class will involve **intensive student participation** in interactive learning exercises, as well as a term project to be presented in class and in reports. I will use class time for interactive learning exercises that

- reinforce key terms, definitions, and equations or
- explore challenging concepts with additional information and different perspectives.

I will generally not simply repeat the material in the text. Here are my expectations:

Participate fully in every class that you can attend. Read the text and watch the pre-recorded podcast before class. Always have the text and your laptop available for class. **Take your own notes** in addition to the posted slides. Study the assigned material in advance, especially by viewing the podcasts and reading the chapters before class. Be an active participant in class; do not just sit and listen.

There are 10 weeks in the quarter, and we will try to cover **10 chapters of the text, thus about a chapter per week. The ten chapters we will study are 1, 2, 3, 4, 5, 6, 7, 8, 12, and 13. In several chapters, I will specify some of the material to skip.** The homework provides practice in key concepts; you are encouraged to get help from me or other students, but the answers you turn in must be in your words with answers that you can explain and defend. For this reason, an important part of your homework will be presenting your answer.

Expect frequent questions about the readings and in-class assignments that test or document your understanding. I will give guidance in advance on which material is most important. In particular, always know the meaning of every word in the assigned portions of the text because learning the "jargon" of the atmosphere is an important part of this class. Quizzes and the mid-term and final exams will include definitions.

IMPORTANT: In this course, you must not remain silent. You must speak as well as listen. If English is not your first language, make use of this as an essential opportunity to practice your English.

Course Policies

Basis for Final Grade: The goal of the quizzes will be to help the student to learn various nomenclature and background of education. Exams are announced in advance and cannot be rescheduled (except with a letter from a “dean, divinity, doctor, or DoD”). Grading will be as follows:

Assessment	Grade	Learning Purpose
Quizzes (Drop 3 Lowest)	10%	Aid memory, practice terms, and check understanding of lower-level objectives.
Questions&Comments (Participation)	10%	Develop and demonstrate conceptual understanding of higher-level objectives.
Midterm (Timed Online)	10%	Assess mastery of core concepts in first four chapters, including key terms and equations.
Homework and Peer Reviews	30%	Perform fundamental calculations and provide quantitative applications.
Project (Presentations and Paper)	20%	Demonstrate application of concepts to a specific data analysis question.
Final (Oral and Timed Online)	20%	Assess mastery of course learning objectives, including term project.

Grading Scale:

- 90 – 100% A
- 80 – 89% B
- 70 – 79% C
- 60 – 69% D
- 0 – 59% F

Grade Dissemination: Graded tests and materials in this course will be returned individually. You can access your scores at any time on TritonEd.

Late Work Policy: There are no make-ups for quizzes or exams. I do not accept late work (except for short delays related to internet access). TritonEd is configured to accept completed assignments up to the due date and time, and then it will not accept submissions. I will share complete information on assignments to allow ample time for completion if you do not procrastinate. Please respect the time of your instructors and your colleagues; plan ahead and submit on time so that we can all progress through this learning experience together.

Grades of "Incomplete": The current university policy concerning incomplete grades will be followed in this course. Incomplete grades are given only in situations where unexpected emergencies prevent a student from completing the course and the remaining work can be completed the next semester. Your instructor is the final authority on whether you qualify for an incomplete. Incomplete work must be finished by

the end of the subsequent quarter or the “I” will automatically be recorded as an “F” on your transcript.

Group Work Policy: Everyone must take part in group projects. All members of a group will receive the same score; that is, the project is assessed and everyone receives this score. However, that number is only 90% of your grade for this project. The final 10% is individual, and refers to your teamwork. Once formed, groups cannot be altered or switched, except for reasons of extended illness.

Disability Access: Students requesting accommodations for this course due to a disability must provide a current Authorization for Accommodation (AFA) letter issued by the Office for Students with Disabilities (OSD), which is located in University Center 202 behind Center Hall. Students are required to present their AFA letters to Faculty (please make arrangements to contact me privately) and to the OSD Liaison in the department in advance so that accommodations may be arranged. Contact the OSD for further information: 858.534.4382 (phone); osd@ucsd.edu(email); <http://disabilities.ucsd.edu>Links to an external site. (website).

Title IX Compliance: The University recognizes the inherent dignity of all individuals and promotes respect for all people. Sexual misconduct, physical and/or psychological abuse will NOT be tolerated. If you have been the victim of sexual misconduct, physical and/or psychological abuse, we encourage you to report this matter promptly. As a faculty member, I am interested in promoting a safe and healthy environment, and should I learn of any sexual misconduct, physical and/or psychological abuse, I must report the matter to the Title IX Coordinator. Should you want to speak to a confidential source you may contact the Counseling Center. The Office for the Prevention of Harassment & Discrimination (OPHD) provides assistance to students, faculty, and staff regarding reports of bias, harassment, and discrimination. OPHD is the UC San Diego Title IX office. Title IX of the Education Amendments of 1972 is the federal law that prohibits sex discrimination in educational institutions that are recipients of federal funds. Students have the right to an educational environment that is free from harassment and discrimination. Students have options for reporting incidents of sexual violence and sexual harassment. Sexual violence includes sexual assault, dating violence, domestic violence, and stalking. Information about reporting options may be obtained at OPHD at (858) 534-8298, ophd@ucsd.edu or <http://ophd.ucsd.edu>Links to an external site.. Students may receive confidential assistance at CARE at the Sexual Assault Resource Center at (858) 534-5793, sarc@ucsd.edu or <http://care.ucsd.edu>Links to an external site. or Counseling and Psychological Services (CAPS) at (858) 534-3755 or <http://caps.ucsd.edu>Links to an external site.. Students may feel more comfortable discussing their particular concern with a trusted employee. This may be a student affairs staff member, a department Chair, a faculty member or other University official. These individuals have an obligation to report incidents of sexual violence and sexual harassment to OPHD. This does not necessarily mean that a formal complaint will be filed. If you find yourself in an uncomfortable situation, ask for help.

Attendance Policy: All students are responsible for all information and updates provided in all scheduled lectures. My expectations for your virtual and mental attendance of class and project times is that you be prepared, engaged, and “present” for all discussions or activities. Illness and unforeseen circumstances may prevent you from attending a few classes during the quarter, and as a matter of courtesy please let instructors know when you will be missing and how you will make up the missed time. Automated podcasts have been scheduled, but they do not always work and do not necessarily include all information given in class (since they do not record what occurs in breakout rooms). Attendance for the problem sessions is optional.

Professionalism Policy: I expect the classroom to be an active, open environment, which encourages diverse thought and comments. Please attend to all university policy and classroom etiquette procedures. Those not heeding the policies will be asked to leave the classroom/lab immediately so as to not disrupt the learning environment. Please arrive on time, be attentive, and respectful for all class meetings. Students who habitually disturb the class by talking, arriving late or other unprofessional behavior may suffer a reduction in their final class grade. Active, positive, engaging, participation in class activities is essential. As pre-professionals or professionals, you should be at the point in your career where you have learned to ask and answer these questions:

1. How do I know when I know something? What is the evidence and how reliable is it?
2. How are things, events, theories, models or people connected? What is the cause and effect?
3. What is new and what is old - have I run across this idea before? When, where, what did it mean to me then, and how I can expand and further connect the concept now?
4. So what? Why does it matter? What does it all mean?

Academic Conduct Policy: The Policy on Integrity of Scholarship aims to encourage and maintain the highest ethical standards in research. The policy reaffirms the University’s commitment to integrity: Integrity is essential for an academic community. The University expects that both faculty and students will honor this principle and in so doing protect the validity of University intellectual work. For students, this means that all academic work will be done by the individual to whom it is assigned, without unauthorized aid of any kind. Instructors, for their part, will exercise care in planning and supervising academic work, so that honest effort will be upheld. It is against policy to submit the same paper for credit in more than one course.

Instructor Goals. At a minimum, I hope to pursue the following goals and solicit your open and timely feedback on how well we are meeting these goals:

- Communicate effectively and frequently;
- Be enthusiastic, active and involved in learning;
- Demonstrate a mastery of the discipline;
- Relate material to current practice and research;
- Clearly explain complex concepts and ideas;

- Provide a framework for lifelong learning;
- Strive to involve participants in class activities;
- Be available to assist participants in or out of class; and
- Have respect and concern for all participants.

Course Information

SIO 217a		Atmospheric and Climate Sciences I:				
2020 Fall		Atmospheric Thermodynamics				
Text:		<i>Thermodynamics of Atmospheres and Oceans, J.A. Curry & P.J. Webster (1999)</i>				
Date	Dy	Ch	Skip	Due	Podcast Topics	In-Class Assignments
5-Oct	M	1	1.2,8-9		What is thermodynamics?	Course Logistics and Questions; Hints for H01.
7-Oct	W	1		Q01	When controls the hydrostatic atmosphere?	Alumni Showcase (Sanchez); Project Data (Profiles).
9-Oct	F			H01		Office Hours.
12-Oct	M	2		Q02	Hurricanes and Energy Cycle Examples.	Answers for H01; Hints for H02.
14-Oct	W	2	2.11		First and Second Laws of Thermodynamics.	Alumni Showcase (Surprise!); Project Data.
16-Oct	F			H02		Office Hours.
19-Oct	M	3	3.4-6	Q03	Transfer Processes.	Answers for H02; Hints for H03.
21-Oct	W	12.1			Radiative Balance Model (12.1).	Alumni Showcase (Matsunobu); Project Data.
23-Oct	F			H03		Office Hours.
26-Oct	M	4	4.5.3-4.6	Q04	Thermodynamics of Water.	Answers for H03; Hints for H04.
28-Oct	W					Alumni Showcase (Pistone); Project Data.
30-Oct	F			H04		Office Hours.
2-Nov	M	5	5.5-7	Q05	Nucleation of Cloud Droplets.	Answers for H04; Hints for H05, including Project part.
4-Nov	W			EXAM		Alumni Showcase (Dedrick); 40-min Midterm (Ch. 1-4, 12).
6-Nov	F			H05		Office Hours.
9-Nov	M	8		Q08	Cloud Characteristics and Processes.	Answers for H05, Midterm; Hints for H08.
11-Nov	W					Holiday: Veteran's Day.
13-Nov	F			H08		Office Hours.

16-Nov	M	6		Q06	Cloud Formation.	Answers for H08; Hints for H06.
18-Nov	W	6			Moist Thermodynamic Processes.	Alumni Showcase (Polonik); Project Data.
20-Nov	F			H06		Office Hours.
23-Nov	M	7		Q07	Stability (skim Eqn. 7.4-19; 7.21-22).	Answers for H06; Hints for H07.
25-Nov	W	7			Stability and Thermodynamic Diagrams.	Alumni Showcase (Osborne); Project Data.
27-Nov	F			H07(Sunday)		Holiday: Thanksgiving.
30-Nov	M	12	12	Q12	Global Energy Balances and Circulation.	Answers for H07; 5-min Project Presentations.
2-Dec	W	13	13.6-7		Thermodynamic Feedbacks for Climate.	Alumni Showcase (Muelmenstaedt); Project Data.
4-Dec	F			H12&13		Office Hours.
7-Dec	M			Q13	Project Feedback.	Answers for H12; Breakouts on Project Feedback.
9-Dec	W				Review Ch 1-8, 12, 13.	Final Exam Review: Breakouts to Practice Sample Orals.
11-Dec	F			PRpt		Office Hours.
16-Dec	W			EXAM	Online and Oral Exams 3-6 pm	Final Exam (Ch. 1-8, 12, 13, Projects).
