# Maximum Capability Document for <br> TSE SD-70 "SIO" <br> S/N 03-2940-01 

Revision 10/03/2016

# Prepared for Scripps Institution of Oceanography with funding provided by the National Science Foundation 

## By

Aaron E. Davis, PE

This document has been prepared to satisfy the requirements set forth in Appendix B of the UNOLS Research Vessel Safety Standard (RVSS) 10 ${ }^{\text {th }}$ Edition.

## Abbreviations

| MCD | Maximum Capability Document |
| :--- | :--- |
| NBL | Nominal Breaking Load |
| RVSS | Research Vessel Safety Standards |
| SWT | Safe Working Tension |
| UNOLS | University-National Oceanographic Laboratory System |

## Purpose

This document formally sets the Safe Working Tension (SWT) for the TSE SD-70 "SIO" and its attached bolting plates; it provides all other information required by section B. 5 of UNOLS RVSS Appendix $B, 10^{\text {th }}$ edition as well.

## Allowable Deployment Types

The TSE SD-70 is a cargo-handling device designed to wind and unwind moorings. It is not an oceanographic winch. It may not be used to conduct towing or station keeping deployments.

## Maximum Capabilities

The SWT below applies when the line is within the limits shown in figure 1.

| SWT | 7,500 lbf |
| :---: | :--- |
| Maximum Line <br> Pull | $7,500 \mathrm{lbf}$ @ $\varnothing 24^{\prime \prime}$ (core) |
|  | $3,750 \mathrm{lbf} @ \not \subset 48^{\prime \prime}$ (full drum) |

Figure 1: Applicable line geometry. Allowable fleet angle $(\theta)$ is $+/-5^{\circ}$. Allowable range of elevation ( $\beta$ ) is $-5^{\circ}$ to $+30^{\circ}$. Chain and removable drum not shown.

## Reaction Forces and Bolting Requirements

TSE SD-70 "SIO" features two bolting plates for fixing it to a vessel's deck. They're illustrated in figures 2 and 3. Each plate has 14 clearance holes for $\varnothing 1$ "-8 UNC deck bolts, but not every hole must be fitted with one. The large number of clearance holes is intended to provide the installer with numerous bolting options.

Three or four $\varnothing 1^{\prime \prime}-8$ UNC deck bolts are typically placed in each bolting plate. One acceptable four-bolt/plate arrangement is shown in figure 2. If this arrangement is used, the bolts must have a yield strength of 6,100 psi or more ${ }^{1}$. Table 2 lists worst-case forces on each deck socket for this arrangement ${ }^{2}$.

Figure 2: An acceptable four-bolt/plate bolting arrangement.

| Table 2 |  |  |  |
| :---: | :---: | :---: | :---: |
| Bolt Number | Fx (lbf) | Fy (lbf) | Fz (lbf) |
| 1 | 1180 | -271 | 1037 |
| 2 | 1180 | -95 | 154 |
| 3 | 1180 | 256 | -1612 |
| 4 | 1180 | 431 | -2494 |
| 5 | 653 | 431 | -2685 |
| 6 | 653 | 256 | -1802 |
| 7 | 653 | -95 | 846 |
| 8 | 653 | -271 | -709 |

## TSE SD-70 "SIO"

Maximum Capability Document
Revision 10/03/2016

An acceptable three-bolt/plate arrangement is shown in figure 3. If this arrangement is used, the bolts must have a yield strength of 7,000 psi or more. Table 3 lists worst-case forces on each deck socket for this arrangement.

Figure 3: An acceptable 3-bolt/plate bolting arrangement.

| Table 2 |  |  |  |
| :---: | :---: | :---: | :---: |
| Bolt Number | Fx (lbf) | Fy (lbf) | Fz (lbf) |
| 1 | 1467 | -424 | 1046 |
| 2 | 1467 | 634 | -946 |
| 3 | 1203 | 634 | -1706 |
| 4 | 938 | 634 | -2465 |
| 5 | 938 | -424 | -473 |
| 6 | 1203 | -424 | 286 |

[^0]:    ${ }^{1}$ For the sake of comparison, a typical AISI 316 stainless steel deck bolt will have a yield strength of 45,000 psi; general-purpose steel bolts, such as SAE Grade 2 , have a yield strength of $\sim 60,000$ psi.
    ${ }^{2}$ Forces in tables 2 and 3 assume an empty drum, which is the worst-case from the point of view of the deck bolts and sockets, but may not be the worst-case for the deck as a whole.
