## Maximum Capability Document

## Hawboldt SPR-2036/S General Purpose - 1722-1

This document has been prepared in accordance with Appendices A and B from the UNOLS RVSS. This machine is primarily used with the following tension members:

1/4" Tension members, with a 6,750 lbf breaking strength
$3 / 8^{\prime \prime}$ Tension members, with a 14,800 lbf breaking strength
$0.322^{\prime \prime}$ Tension members, with a $11,600 \mathrm{lbf}$ breaking strength
Synthetic tension members of varying size and breaking strength
The machine's levelwind sheave has two liners: one grooved for $\varnothing 3 / 8$ " wire rope, and one grooved for $\emptyset .322^{\prime \prime}$ EM cable. Per Appendix A, Tables A.8.1 to A.8.4, the machine qualifies for a Factor of Safety (FS) of 1.5 on the tension member when used with $\varnothing 3 / 8^{\prime \prime}$ wire rope and liner, it qualifies for a Factor of Safety (FS) of 2.0 on the tension member when used with $\varnothing .322^{\prime \prime}$ cable and liner, and qualifies for a Factor of Safety (FS) of 2.5 on the tension member when used with $\varnothing 1 / 4^{\prime \prime}$ wire rope and either $3 / 8^{\prime \prime}$ or $0.322^{\prime \prime}$ liner.

Per Appendix $B$, for tension members possessing an NBL of $15,000 \mathrm{lbf}$ or less, this machine is constructed in accordance with B.4.7.1, and rated for "Lifting and Towing-Deep Water". Per Appendix B.4.7.2, stronger tension members are permitted on uninspected vessels provided the deployed length does not exceed $75 \%$ of the nominal water depth. This is also allowed on inspected vessels provided a special case is granted by the US Coast Guard Marine Safety Center

## System Characterizations

| Empty Weight | $3,800 \mathrm{lbf}$ |
| :--- | ---: |
| SWT of Winch | $3,500 \mathrm{lbf}$ |
| SWT Fleet Tolerance | $+45^{\circ} /-10^{\circ}$ vertical, $+/-5^{\circ}$ horizontal |
| DLT of Winch | $15,000 \mathrm{lbf}$ |
| Max. Line Speed @ Bare Drum | $103 \mathrm{ft} / \mathrm{min}$ |
| Power Requirements | $480 \mathrm{VAC} / 3 \mathrm{PH} / 60 \mathrm{HZ}$ |
| Bare Drum Pull | $3,500 \mathrm{lbf}$ |
| Full Drum Pull | $1,830 \mathrm{lbf}$ |

There are two mounting options for this winch. The first, is a 6 bolt pattern which matches the UNOLS $2^{\prime} \times 2^{\prime}$ bolt pattern. The second, is a 6 bolt pattern consisting of threaded bosses on two sides of the winch frame.

Free Body Diagram

Forces are maximum forces per bolt, at SWT \& DLT, for the 6 bolt pattern in the winch base frame. The analysis is valid for a vertical fleet angle of $+45^{\circ} /-10^{\circ}$ and horizontal fleet angle of $+/-5^{\circ}$. The analysis is also valid for both reeving options shown, with and without levelwind.

|  |  | Reaction @ SWT | Reaction @ DLT | Mounting Fasteners |
| :---: | :---: | :---: | :---: | :---: |
| Mounting | Fx [lbf] | 552 | 2,400 | $1^{\prime \prime}-8$ UNC |
| Option 1 | Fy [lbf] | 432 | 4,000 | $316 \mathrm{SS}\left(\sigma_{\mathrm{y}}=40 \mathrm{ksi}\right)$ |
| Mounting | Fx [lbf] | 552 | 2,400 | $1^{\prime \prime}-8$ UNC |
| Option 2 | Fy [lbf] | 354 | 3,250 | $316 \mathrm{SS}\left(\sigma_{\mathrm{y}}=40 \mathrm{ksi}\right)$ |

Mounting fasteners shall be lubricated and torqued to 210 ft . lb ( $\mathrm{K}=0.15$ ).
