Advisor-Masters Student Expectations at SIO

This document articulates the minimum expectations for both students and advisors at SIO.
These expectations are intended to lay the foundation for building a successful student-advisor relationship.

Advisor Expectations

Advisors will be committed to the education and training of their graduate student. Advisors are important role models to their student, and will lead by example, facilitating the training of the graduate student in the skills needed to be successful. In addition to scientific expertise, these skills include oral and written communication, management skills, ethical conduct, and scholarly professionalism. The advisor will encourage their student to seek opportunities in professional development.

Advisors will recognize the power differential between themselves and their student, and the disproportionate influence of their words and actions. Advisors will recognize that their students are learning new skills and will take longer to accomplish tasks than it might take the advisor. Advisors will recognize that failure is an important part of learning. Advisors will be supportive, accessible, encouraging, and respectful to their student. They will foster the graduate student's professional confidence and encourage critical thinking, skepticism, and creativity. Advisors will be respectful of their student's intellectual, cultural, political, ethnic, gender, and other forms of diversity.

1. An advisor will establish a research environment that is intellectually stimulating, supportive, safe, and free of harassment.

2. An advisor will be knowledgeable of the policies, requirements, and deadlines of the graduate program as well as those of the institution, including curricular group requirements and applicable business office guidelines. The advisor will guide their graduate student in these areas to ensure academic and professional success.

3. An advisor will meet in person regularly (at least once per month) with their graduate student, and provide constructive feedback on the progress and results of ongoing research and/or coursework. Meetings are an opportunity to ask questions, discuss expectations (including, but not limited to, coursework and research), receive feedback, and set goals.

4. An advisor will work with their graduate student to develop and execute a thesis project. This will include providing advice in writing a thesis proposal, and discussing how to achieve the goals of the proposal. The advisor will work with their student to ensure continuing progress.

5. An advisor will work with their graduate student to select a thesis committee. The advisor will provide support to their student in scheduling annual committee meetings to review the student's progress.

6. An advisor will provide feedback on their graduate student's written documents within a month at most, keeping in mind that responses within a week or less would be more appropriate. In the event that the one month time frame is not feasible, the advisor will provide a timeline for feedback.

Advisor-Masters Student Expectations at SIO

7. An advisor will mentor their graduate student in following proper lab procedure and maintaining documentation of their work (e.g., lab procedures, computer code).

8. An advisor will discuss expectations of their graduate student's work hours, working remotely, sick leave, and vacation. The advisor will inform their student in advance of any planned absences (e.g., sabbaticals, field work, vacations) and adjust expectations accordingly.

9. An advisor will discuss acknowledgement of intellectual contributions to and authorship of presentations, publications, and other publicly disseminated work with their graduate student. The advisor will work with their student to present and publish the student's work in a timely manner.

10. An advisor will discuss intellectual property issues with the student regarding disclosure, patent rights, and publishing research discoveries.

11. An advisor will encourage their graduate student to attend professional meetings or workshops, and make an effort to secure and facilitate funding for such activities. The advisor will promote attendance at seminars and journal clubs that are beneficial to their student's professional development.

12. An advisor will provide career advice and guidance in finding a position for their graduate student following graduation. The advisor will provide honest and timely letters of recommendation and be accessible for advice and feedback on career goals.

13. An advisor will not require the graduate student to perform tasks unrelated to their academic and professional development (e.g., babysitting, dog walking, etc.).

Masters Student Expectations

Graduate students have the primary responsibility to work towards the successful completion of their degree. They will be committed to their graduate education and will demonstrate this through their efforts in the classroom and research activities.

Graduate students are expected to maintain a high level of professionalism, self-motivation, engagement, scholarly curiosity, and ethical standards. Students must recognize that they represent their advisors, labs, and the institution in public and professional settings, and conduct themselves accordingly. They will seek guidance from available resources, including their research advisor, thesis committee, career counseling services, peers, and any other mentors.

Graduate students will acknowledge their own responsibility for developing their career, following the completion of their doctoral degree.

1. A graduate student will contribute to maintaining a research environment that is intellectually stimulating, supportive, safe, and free of harassment.

2. A graduate student will be knowledgeable of and compliant with the policies, requirements, and deadlines of the graduate program and the institution. The student will strive to meet these policies and requirements in both letter and spirit. They will take the initiative to meet all degree requirements in a timely manner.

Advisor-Masters Student Expectations at SIO

3. A graduate student will meet in person regularly (at least once per month) with their advisor(s), and provide updates on the progress and results of ongoing research and/or
coursework. Meetings are an opportunity to ask questions, discuss expectations (including, but not limited to, coursework and research), receive constructive feedback,
and set goals.

4. A graduate student will work with their advisor(s) to develop and execute a thesis project.
This will include soliciting advice in writing a thesis proposal, and discussing how to
achieve the goals of the proposal. The student will work with their advisor(s) to ensure continuing progress.

5. A graduate student will work with their advisor(s) to select a thesis committee. The
student will organize and meet with this committee at least annually to report on
progress, and receive advice as well as constructive criticism from the committee members.

6. A graduate student will keep complete documentation of their work (e.g., lab procedures,
computer code) and be prepared to share it with their advisor(s).

7. A graduate student will discuss expectations of work hours, working remotely, sick leave,
and vacation with their advisor(s). The student will consult with their advisor(s) in
advance of any planned absences (e.g., field work, vacations) and adjust expectations accordingly.

8. A graduate student will discuss acknowledgement of intellectual contributions to and
authorship of presentations, publications, and other publicly disseminated work with
their advisor(s). The student will work with their advisor(s) to write and submit their research in a timely
manner.

9. A graduate student will discuss intellectual property issues with their advisor(s) regarding
disclosure, patent rights, and publishing research discoveries.

10. A graduate student will expect to attend and/or participate in professional meetings or
workshops, as well as seminars and journal clubs that are beneficial to the student's professional
development. Criteria for attendance should be discussed with their
advisor(s).

If you need guidance or support in fulfilling the above expectations, or to address issues
that cannot be resolved between the above parties, useful resources may be found in the
SIO Student Handbook and the Faculty Handbook.

American Medical Colleges, January 2017.

Revised 9/19/2023

Course Title: Graduate Thesis Research and Professional Development

Course: SIO 299

Contact Information:
Course Instructor: *Instructor's Name, Contact Information, Office location*

Course Description:
SIO 299 provides master's and doctoral students with the opportunity to conduct advanced research in the marine sciences. The Scripps Institution of Oceanography (SIO) offers a PhD or MS in Oceanography, Marine Biology, and Earth Sciences. In addition, SIO offers a joint doctoral degree in Geophysics with San Diego State University.

SIO 299 will facilitate the development of critical thinking and problem-solving skills, independent research aptitude, proficiency in using modern research tools and techniques, and the rigorous interpretation of data in the context of the current literature. It emphasizes active involvement in research projects, including field-based methods, if appropriate. Students are strongly encouraged to develop their own research questions. Research ethics, professional development, and the responsible conduct of research will be incorporated throughout the course. Training on ensuring rigor and reproducibility for research results will be emphasized. As part of the 299 instruction, evaluation, and revision of the student's Individual Development Plan (IDP) will be prioritized to define short- and long-term career goals.

While employment (e.g., a GSR or IA appointment) is performed as a service for a defined period or a specified set of activities, academic effort under SIO 299 is undertaken in pursuit of a defined academic goal (MS or PhD) that is not always associated with a precise expectation of time or with predetermined activities. This means that learning outcomes and assessment methods will be determined and administered over several years. However, a subset of objectives that should be achieved in a particular quarter must be discussed to ensure timely grading and completion each quarter.

Prerequisites: Admission to an SIO PhD or MS graduate program. Enrollment requires permission of the instructor, typically the thesis research advisor or co-advisor.

Units: Up to 12 units per quarter with one advisor (with the possibility of up to 16 units if the student has multiple advisors). Each unit represents 3 hours or more of academic activity per week, as outlined by UC San Diego Academic Senate and the Western

Association of Schools and Colleges (WASC) credit-hour policy. Therefore, 12 units of SIO 299 credits correspond to a minimum 36 hours of academic activity per week for each week of the quarter. To remain a full-time student, individuals must be registered for 12 units per quarter. Early career PhD students and most MS students will be enrolled in a combination of coursework and research (SIO 299) to satisfy their full-time status. However, more senior graduate students are expected to be primarily focusing on academic activities related to SIO 299.

Grading:

S/U grades only. All work is due no later than Friday of Finals Week. Final Grades are due no later than Tuesday following Finals Week. Any requests for additional time should be made in accordance with UCSD's policy on Incompletes: https://senate.ucsd.edu/Operating-Procedures/Senate-Manual/Regulations/500#B

Course Topics:
We expect that course topics will vary from quarter to quarter; there may be topics not listed here that will be relevant for some students and research groups.

1. Research Methods
   o Overview of research paradigms and approaches
   o Formulating research questions and objectives
   o Understanding the research process

2. Literature Review and Conceptual Framework
   o Conducting a comprehensive literature review
   o Critical analysis of the relevant published data
   o Identifying research gaps and justifying the research study
   o Developing a conceptual framework

3. Research Design, Data Collection, and Data Analysis
   o Design of experimentation, observations, statistical methods, and/or models
   o How to perform experiments, data analysis, and/or modeling
   o Data collection methods
   o Data analysis and interpretation
   o Quantitative data analysis
   o Qualitative data analysis
   o Interpreting research findings and drawing conclusions

4. Writing and Presenting Research Findings
   - o Scientific writing skills
   - o Effective data visualization and graphical representation
   - o Oral presentation skills

5. Research Ethics, Responsible Conduct of Research, and Professional Development
   - o Ethical principles in research
   - o Professional conduct in workplace
   - o Professional and respectful communication skills
   - o Plagiarism and intellectual property rights
   - o Review and discussion of Individual Development Plan (IDP)

Learning Outcomes:

Upon completion of the course, the student will have enhanced and further developed skills in the following areas.

1. Formulation of research hypotheses in the context of current knowledge
2. Determination of scientific approaches to testing a research hypothesis
3. Proper lab experimental design, field sampling strategies, data analysis methods, model design, and/or access to archived data to ensure rigor and reproducibility
4. Performing experiments, field work, model simulations, statistical analyses, and/or archived data syntheses to address a research hypothesis
5. Analysis and interpretation of data
6. Development of alternative hypotheses and explanations for the results
7. Synthesis of results with current literature to formulate new scientific knowledge and hypotheses
8. Written and oral presentation of research findings (communication skills)
9. Consideration and incorporation of ethical issues in research
10. Evaluation and guidance of short- and long-term professional goals (IDP review)

Assessment Methods:

1. <u>Research Practice</u>: Evaluation of the student's laboratory, field, engineering or computational techniques, data collection and analysis, problem-solving skills, attention to laboratory/field safety, and practice of the responsible conduct of research. Regular attendance and participation are required as is attendance for any scheduled research group meetings. Performance metrics can include development and utilization of project-specific methodologies, successful organization of research activities, and

acquisition of background knowledge through literature review. Please refer to the PhD milestones document (Appendix 1), which provides a basic set of expectations to be met each year in order to receive a satisfactory grade.

2. <u>Written Research Report</u>: A written report that includes the background & significance, initial plans, new results, data analysis and interpretation, and future plans.

3. <u>Oral Presentation</u>: An oral presentation that contains background & significance, initial plans, new results, data analysis and interpretation, and future plans.

Resources and Materials:

Resources and materials will be provided by the thesis advisor's research program or collaborators. Students are expected to familiarize themselves with the specific protocols and techniques relevant to their project. The course instructor and associated personnel are available for consultation and support.

Additional Information:

Maintaining a safe and respectful environment in the lab/field is required at all times. All safety procedures should be strictly followed. Also, while this course is largely self-directed, regular meetings with the course instructor and thesis or guidance committee are required to ensure progress, support, and instruction. This includes development and discussion of the Individual Development Plan (IDP) with the thesis advisor and committee members for students in their second year and beyond.
